

CHENG LI | SENIOR SOFTWARE ENGINEER

Cell: (347)-952-5395 | Email: cheng.li.dev@gmail.com | Website: chengli.dev | LinkedIn: linkedin.com/in/cheng-li

SUMMARY

Senior Software Engineer with 7+ years of experience architecting revenue-critical backend platforms, modernizing enterprise systems, and designing scalable distributed services that process millions of daily financial transactions.

TECHNICAL SKILLS

- **Languages:** C#, SQL, JavaScript
- **Framework:** .NET Core, ASP.NET Core, Entity Framework Core
- **Architecture:** Distributed Systems, Microservices, REST APIs, System Design
- **Tools & Platforms:** Git, Azure DevOps, CI/CD, SQL Server

WORK EXPERIENCE

FINYS

Troy, MI | January 2019 – Present

Senior Software Engineer

2024 – Present

- Architected Billing 3.0 by redesigning core billing workflows from runtime recalculation to persisted state transitions, reducing scheduled billing processing time by over 90% while scaling to millions of daily billing transactions.
- Defined the architectural foundation for Billing 3.0, designing domain models, service boundaries, API contracts, and migration strategy that enabled incremental modernization while preserving compatibility across 20+ enterprise clients.
- Designed and owned REST API contracts across billing microservices, establishing clear service ownership and versioning strategies that decoupled UI, policy administration, and downstream integrations.
- Led a cross-functional engineering team, partnering with product, data, and UI teams to drive technical direction, resolve production incidents, and deliver backward-compatible solutions for revenue-critical billing workflows.
- Served as the technical owner for production-critical billing services, driving root-cause analysis and architectural improvements across 20+ enterprise clients.
- Optimized Billing 3.0 data models, indexing, and query patterns, reducing query latency by over 80% across core billing workflows.

Software Engineer

2019 – 2024

- Designed and developed a migration framework that transformed legacy billing data into a standardized Billing 2.0 platform, enabling incremental modernization while preserving data integrity across heterogeneous policy systems.
- Led the migration for the organization's largest client, successfully modernizing 15+ years of billing history into a shared billing platform that supported both legacy and modern policy administration systems with zero business disruption.

EDUCATION

Grand Valley State University

Allendale, MI | May 2019

Bachelor of Science in Computer Science
