

CHENG LI | SENIOR SOFTWARE ENGINEER

Cell: (347)-952-5395 | Email: cheng.li.dev@gmail.com | Website: chengli.dev | LinkedIn: linkedin.com/in/cheng-li

SUMMARY

Senior Software Engineer with 7+ years of experience architecting revenue-critical backend platforms, modernizing enterprise systems, and designing scalable distributed services that process millions of daily financial transactions.

WORK EXPERIENCE

FINYS, Troy MI

January 2019 – Current

Senior Software Engineer

May 2024 – Present

- Architected Billing 3.0 by redesigning core billing workflows from runtime recalculation to deterministic state-transition models, reducing issuance latency by over 90% and enabling the platform to scale to millions of daily financial transactions.
- Defined the architectural foundation for Billing 3.0, including domain models, service boundaries, API contracts, and migration strategy, enabling incremental modernization while maintaining backward compatibility with existing clients.
- Designed and owned REST API contracts across billing microservices, establishing clear service ownership and versioning strategies that decoupled UI, policy administration, and downstream integrations.
- Led a cross-functional billing engineering team, partnering with product, data, and UI teams to drive technical direction, resolve production incidents, and deliver backward-compatible solutions for revenue-critical billing workflows.
- Served as the technical owner for production-critical billing services, leading root-cause analysis and architectural improvements while maintaining backward compatibility across 20+ enterprise client implementations.

Software Engineer

2019 – 2024

- Designed and developed a migration framework that transformed legacy billing data into a standardized Billing 2.0 platform, enabling incremental modernization while preserving data integrity across heterogeneous policy systems.
- Led the migration for the organization's largest client, successfully modernizing 15+ years of billing history into a shared billing platform that supported both legacy and modern policy administration systems with zero business disruption.

SKILLS

- **Programming:** C#, .NET Core, JavaScript, SQL, Python, C, Java
- **Backend:** Distributed Systems, Microservices, REST APIs, System Design
- **Tools:** Git, Azure DevOps, CI/CD, SQL Server
- **Leadership:** Technical Leadership, Cross-functional Collaboration, Mentorship

EDUCATION

Grand Valley State University, B.S in Computer Science

May 2019
