

SUMMARY

Senior Software Engineer with 7+ years of experience designing, building, and scaling backend platforms and distributed systems. Hands-on technical lead with end-to-end ownership of platform modernization, performance optimization, large-scale data migrations, and production operations.

TECHNICAL SKILLS

Languages: C#, SQL, JavaScript, TypeScript
Backend & UI: .NET 9/.NET Core, .NET Framework, ASP.NET Core/MVC/Razor, Kendo UI
Architecture: Distributed Systems, Microservices, REST APIs, Event-Driven Architecture, Dapr Actors
Data: SQL Server, Entity Framework/EF Core, Data Modeling, Query Optimization, Indexing, Bulk Processing
Engineering: Azure DevOps, Git, CI/CD, Unit/Integration Testing, Grafana, GitHub Copilot, MCP/AI Agents

WORK EXPERIENCE

FINYS Troy, MI | January 2019 – Present
Senior Software Engineer 2024 – Present

- Architected and implemented a distributed transaction-processing platform (Billing 3.0) designed to support 2M+ insurance policies; replaced repeated recalculation with persisted state transitions, increasing benchmark throughput 12x (100K operations: ~6 hours to ~30 minutes).
- Designed, implemented, and operated backend services and REST APIs, defining service boundaries, event-driven workflows, and third-party integrations for account management and payment processing.
- Redesigned account-level concurrency control using Dapr Actors, eliminating ~200K lock-table accesses per 100K operations while preserving consistency for concurrent activity on the same account.
- Redesigned core SQL Server data architecture, consolidating fragmented models and simplifying query paths; reduced database I/O by ~90% across representative workflows.
- Re-engineered a multi-stage migration system for parallel and horizontal scale, reducing end-to-end runtime by 82% on an 800K-transaction workload and increasing measured replay throughput by over 10x.
- Led 10 developers and 3 business analysts, establishing sub-lead ownership and reducing the client-support backlog by 50% (~800 to ~400 items) over two years.
- Built a delivery automation agent used by the team, reducing per-change preparation from ~1–2 hours to ~25 minutes through ticket-linked code changes, standardized commits, and Azure DevOps pull requests.
- Owned production-critical backend services across 20+ enterprise clients, driving root-cause analysis and backward-compatible fixes to resolve complex failures and prevent recurrence.

Software Engineer 2019 – 2024

- Designed and built a multi-stage data migration and replay system for 15+ years of legacy history; replayed 10M+ operations to date by reconstructing financial state in the target platform.
- Integrated and launched an enterprise transaction-processing platform supporting ~600K insurance policies, connecting legacy and modern services through production go-live.
- Led client-facing technical delivery and production troubleshooting for enterprise platform implementations, resolving complex data issues and mentoring engineers into independent ownership.

EDUCATION

Grand Valley State University Allendale, MI | May 2019
Bachelor of Science in Computer Science
